Monografía

This second edition of Membrane Protein Purification and Crystallization, A Practical Guide is written for bench scientists working in the fields of biochemistry, biology, and proteomic research. This guide presents isolation and crystallization techniques in a concise form, emphasizing the critical aspects unique to membrane proteins. It explains the principles of the methods and provides protocols of general use, permitting researchers and students new to this area to adapt these techniques to their particular needs. This edition is not only an update but is comprised mainly of new contributions. It is the first monograph compiling the essential approaches for membrane protein crystallization, and emphasizes recent progress in production and purification of recombinant membrane proteins. Key features * Provides general guidelines and strategies for isolation and crystallization of membrane proteins * Gives detailed protocols that have wide application, and low specialized equipment needs * Emphasizes recent progress in production and purification of recombinant membrane proteins, especially of histidine-tagged and other affinity-epitope-tagged proteins * Summarizes recent developments of Blue-Native PAGE, a high resolution separation technique, which is independent of the use of recombinant techniques, and is especially suited for proteomic analyses of membrane protein complexes * Gives detailed protocols for membrane protein crystallization, and describes the production and use of antibody fragments for high resolution crystallization * Presents a comprehensive guide to 2D-crystallization of membrane proteins

Título: Membrane protein purification and crystallization Recurso electrónico] :] a practical guide edited by Carola Hunte and Gebhard von Jagow and Hermann Schagger

Edición: 2nd ed

Editorial: Amsterdam Boston Academic Press c2003

Descripción física: xviii, 316 p. ill. (some col.) 24 cm

Mención de serie: Books on ScienceDirect

Bibliografía: Includes bibliographical references and index

Contenido: I. Strategies and Techniques -- Purification Strategies for Membrane Proteins. -- Chromatographic Techniques and Basic Operations in Membrane Protein Purification. -- Production and purification of recombinant membrane proteins. -- SDS Electrophoresis Techniques. -- Blue-Native Electrophoresis. -- Preparative Isoelectric Focussing. -- Membrane protein crystallization. -- II. Discussion of Selected Isolation Protocols -- Lipid Dependent Inactivation and Reactivation of Bovine complex III. -- Purification of affinity-epitope tagged G-protein coupled receptors. -- Purification of NhaA, the Na⁺/H⁺ Antiporter of Escherichia coli for 3D or 2D -- Crystallization. -- Purification of the yeast cytochrome bc1 complex. -- III. Crystallization of Membrane Proteins -- Antibody fragment-mediated crystallization of membrane proteins. -- Crystallization of Wolinella succinogenes quinol: fumarate reductase. -- Ba3-type cytochrome-c oxidase from Thermus thermophilus: -- purification, crystallization, and crystal transformation. -- Two-dimensional crystallization of membrane proteins: a practical guide. -- In cubo crystallization of membrane proteins
