This volume presents a collection of reviews derived from work presented at the Aegean Conference: g2s3rd Crossroads between innate and adaptive immunityg3s which occurred during September 27 - October 2, 2009 at the Minoa Palace Conference Center in Chania, Crete, Greece. This meeting was the third in a series, and assembled a team of scientists working on mechanisms by which the innate immune system of the host senses pathogens, the cellular and signaling networks that orchestrate the innate response and antigen presentation and adaptive immunity. The various facets of the innate response, including dendritic cells, T cells, B cells, NK cells, NK-T cells and the complement cascade during the host response to pathogens and tumors is only now starting to be elucidated. The respective fields that focus on these immune cells and molecules have tended to be relatively compartmentalized, and yet emerging evidence points to the interconnectedness of these facets in coordinating the innate response, and its subsequent impact on the adaptive response. The goal of this conference was to initiate cross-talk between these diverse immunological fields, and promote and facilitate discussion on the interactions between the innate immune response and the adaptive immune response and ultimately facilitate collaboration between these areas of study. Following on the footsteps of the outstanding success of its precursors, the g2s3rd Crossroads between Innate and Adaptive Immunityg3s Aegean Conference was highly successful in bringing together and connecting scientists and experts from around the world to address critical areas of Innate and Adaptive immunity

Título: Crossroads between Innate and Adaptive Immunity III [Recurso electrónico] edited by Bali Pulendran, Peter D Katsikis, Stephen P Schoenberger

Editorial: New York [etc.] Springer

Descripción física: X, 174 p

Mención de serie: Advances in Experimental Medicine and Biology 0065-2598 780

Contenido: Is Transcription the Dominant Force during Dynamic Changes in Gene Expression? -- MicroRNAs: Key Components of Immune Regulation -- KIR/HLA: Genetic Clues for a Role of NK cells in the Control of HIV

-- Natural Killer cell Licensing during Viral Infection -- Bridging Innate NK cell Functions with Adaptive Immunity -- Control of Innate Immunity by Memory CD4 T cells -- Strategies and Implications for Prime-Boost Vaccinations to Generate Memory CD8 T Cells -- Blimp1: Driving Terminal Differentiation to a T -- A new Role for Myeloid HO-1 in the Innate to Adaptive Crosstalk and Immune Homeostasis -- Impact of Differential Glycosylation on IgG Activity -- Murine Model of Chronic Respiratory Inflammation -- Incorporation of Innate Immune Effector Mechanisms in the Formulation of a Vaccine Against HIV-1 -- Influenza Vaccines: What do we Want and How can we Get it?

Detalles del sistema: Modo de acceso: Word Wide Web Modo de acceso: World Wide Web
