Monografía

Exploring the structure and mechanics of aging soft tissues, this edited volume presents authoritative reviews from leading experts on a range of tissues including skin, tendons, vasculature and plantar soft tissues. It provides an overview of in vivo and in vitro measurement techniques including state-of-the-art methodologies, as well as focusing on the structural changes that occur within the main components of these tissues resulting in detrimental mechanical property changes. It also highlights the current challenges of this field, and offers an insight into future developments. Age-related changes in the mechanical properties of soft tissues have a profound effect on human morbidity and mortality, and with changing global demographics, there is growing interest in this area. There has been increasing interest in robustly characterizing these mechanical changes to develop structure-property relationships, and growing awareness of the need for enhanced predictive models for computational simulations. This book seeks to address the challenges involved in applying these engineering techniques to reliably characterize these tissues. Focusing on a wide range of tissues and presenting cutting-edge techniques, this book provides an invaluable reference to academics and researchers in a range of disciplines including biomechanics, materials science, tissue engineering, life sciences and biomedicine. .

Título: Mechanical Properties of Aging Soft Tissues Recurso electrónico] edited by Brian Derby, Riaz Akhtar

Editorial: New York [etc.] Springer

Descripción física: VI, 268 p. 88 illus

Mención de serie: Engineering Materials and Processes 1619-0181

Contenido: Introduction -- Intervertebral Disc Tissues -- Age-related changes in the mechanical properties of large arteries -- Mechanical Properties of Aging Skeletal Muscle -- Biomechanics of the aging lung parenchyma -- Mechanical Properties of the Aging Tendon -- Effects of Aging on the Cellular Function, Healing and Mechanical

Properties of Ligaments -- The Biomechanics of Aging and Diabetic Plantar Soft Tissue -- Age-related variation in the biomechanical and structural properties of the corneo-scleral tunic -- Mechanical Properties of Aging Human Skin

Detalles del sistema: Modo de acceso: World Wide Web

Fuente de adquisición directa: Springer (e-Books)

ISBN: 9783319039701 9783319039695

Autores: Derby, Brian., editor Akhtar, Riaz., editor

Punto acceso adicional serie-Título: Engineering Materials and Processes 1619-0181
