This contributed volume contains the results of the research program "Agreement for Hybrid and Electric Vehicles", funded by the International Energy Agency. The topical focus lies on technology options for the system optimization of hybrid and electric vehicle components and drive train configurations which enhance the energy efficiency of the vehicle. The approach to the topic is genuinely interdisciplinary, covering insights from fields. The target audience primarily comprises researchers and industry experts in the field of automotive engineering, but the book may also be beneficial for graduate students

Título: Advanced Hybrid and Electric Vehicles System Optimization and Vehicle Integration edited by Michael Nikowitz

Editorial: Cham Springer International Publishing Imprint: Springer 2016

Descripción física: 1 recurso en línea XXII, 211 p. 185 illus., 176 illus. in color

Mención de serie: Lecture Notes in Mobility 2196-5544 Springer eBooks

Contenido: Introduction -- OEM and Industry Review -- International Deployment and Demonstration Projects -- Advanced Vehicle Performance Assessment -- System Optimization and Vehicle Interaction -- Final Results and Recommendations

Detalles del sistema: Modo de acceso: World Wide Web

ISBN: 9783319263052

Materia: Engineering Transportation Management Industrial management Automotive engineering Sustainable development Engineering Automotive Engineering Transportation Sustainable Development Innovation /Technology Management

Autores: Nikowitz, Michael., editor

Entidades: SpringerLink (Online service)

Punto acceso adicional serie-Título: Lecture Notes in Mobility 2196-5544
