Monografía

The series Topics in Organometallic Chemistry presents critical overviews of research results in organometallic chemistry. As our understanding of organometallic structure, properties and mechanisms increases, new ways are opened for the design of organometallic compounds and reactions tailored to the needs of such diverse areas as organic synthesis, medical research, biology and materials science. Thus the scope of coverage includes a broad range of topics of pure and applied organometallic chemistry, where new breakthroughs are being achieved that are of significance to a larger scientific audience. The individual volumes of Topics in Organometallic Chemistry are thematic. Review articles are generally invited by the volume editors. All chapters from Topics in Organometallic Chemistry are published OnlineFirst with an individual DOI. In references, Topics in Organometallic Chemistry is abbreviated as Top Organomet Chem and cited as a journal

Título: C-H Bond Activation and Catalytic Functionalization II [Recurso electrónico] edited by Pierre H. Dixneuf, Henri Doucet

Mención de serie: Topics in Organometallic Chemistry 56

Contenido: Iron-Catalyzed C-H Bond Activation -- Nickel-catalyzed C-H bond functionalization -- Copper-Mediated Intermolecular C-H/C-H and C-H/N-H Couplings via Aromatic C(QA(B(3C(BH cleavage -- The Effects of Ancillary Ligands on Metal-Carbon Bond Strengths as Determined via C-H Activation -- Catalytic C-H bond functionalization of cyclopropane derivatives -- Silver-Mediated Direct sp³ C-H Transformations -- Applications of catalytic organometallic C(sp³)-H Bond functionalization -- New concepts of C-H and C-C bond activation via surface organometallic chemistry -- Transfer Dehydrogenations of Alkanes and Related Reactions using Iridium Pincer Complexes
