Monografía

This book consists of papers presented at an International workshop on Computer-Aided Scheduling of Public Transport, held at the Massachusetts Institute of Technology in 1997. This Workshop series has focused on vehicle and crew scheduling problems, and the development of software systems incorporating operations research techniques for operational planning in public transport. More recently, the scope of topics has broadened to reflect the greater roles played by computers in the full spectrum of scheduling problems, and societal demand for greater access to public transport. Accordingly several papers are included on demand-responsive systems, service design, operations control, and automatic public information systems. It is clear that the state-of-the-art in software, hardware, and operations research will continue to advance at a rapid rate, dealing with the expanded, complex problems of planning and operational control in public transport, as they relate to scheduling

Título: Computer-aided transit scheduling proceedings, Cambridge, MA, USA, August 1997 Nigel H.M. Wilson (ed.).

Editorial: Berlin New York Springer ©1999

Descripción física: 1 online resource (xi, 464 pages) illustrations

Mención de serie: Lecture notes in economics and mathematical systems 471

Bibliografía: Includes bibliographical references

Contenido: Foreword -- Part 1: Crew Scheduling -- Part 2: Vehicle Scheduling and Service Design -- Part 3: Real-Time Control, Demand Responsive Systems and Information Systems -- Appendix 1: List of Authors -- Appendix 2: List of the Presented Papers Which are not Included in this Volume

ISBN: 9783642859700 electronic bk.) 3642859704 electronic bk.) 3540657754 9783540657750
