Monografía

"Bone is the tissue most frequently recovered archaeologically and is the material most commonly studied by biological anthropologists, who are interested in how skeletons change shape during growth and across evolutionary time. This volume brings together a range of contemporary studies of bone growth and development to highlight how cross-disciplinary research and new methods can enhance our anthropological understanding of skeletal variation. The novel use of imaging techniques from developmental biology, advanced sequencing methods from genetics, and perspectives from evolutionary developmental biology improve our ability to understand the bases of modern human and primate variation. Animal models can also be used to provide a broad biological perspective to the systematic study of humans. This volume is a testament to the drive of anthropologists to understand biological and evolutionary processes that underlie changes in bone morphology and illustrates the continued value of incorporating multiple perspectives within anthropological inquiry. Provides a contemporary context to enable researchers to understand the relevance of development to more traditional research questions; Uses real-life research examples to illustrate how methods and knowledge from the fields of developmental biology, genetics, histology, morphometrics, and imaging can provide new insights; Provides a 'how-to' guide to the latest techniques used in the study of bone growth and development"--The publisher

Título: Building bones Recurso electrónico] bone formation and development in anthropology edited by Christopher J. Percival (University of Calgary, Canada) and Joan T. Richtsmeier (Pennsylvania State University, USA)

Editorial: Cambridge, United Kingdom Cambridge University Press [2017]

Descripción física: 1 recurso electrónico

Variantes del título: Bone formation and development in anthropology

Mención de serie: CUP ebooks Cambridge studies in biological and evolutionary anthropology

Bibliografía: Incluye referencias bibliográficas e índice

Contenido: What is a biological 'trait'? / Kenneth Weiss -- The contribution of angiogenesis to variation in bone development and evolution / Christopher J. Percival, Kazuhiko Kawasaki, Yuan Huang, Kenneth Weiss, Ethylin Wang Jabs, Runze Li and Joan T. Richtsmeier -- Association of the chondrocranium and dermatocranium in early skull formation / Kazuhiko Kawasaki and Joan T. Richtsmeier -- Unique ontogenetic patterns of postorbital septation in tarsiers and the issue of trait homology / Valerie B. DeLeon, Alfred L. Rosenberger and Timothy D. Smith -- Exploring modern human facial growth at the micro- and macroscopic levels / Sarah E. Freidline, Cayetana Martinez-Maza, Philipp Gunz and Jean-Jacques Hublin -- Changes in mandibular cortical bone density and elastic properties during growth / Paul C. Dechow -- Postcranial skeletal development and its evolutionary implications / David B. Burr and Jason M. Organ -- Combining genetic and developmental methods to study musculoskeletal evolution in primates / Terence D. Capellini and Heather Dingwall -- Using comparisons between species and anatomical locations to discover mechanisms of growth plate patterning and differential growth / Kelsey M. Kjosness and Philip L. Reno -- Ontogenetic and genetic influences on bone's responsiveness to mechanical signals / Ian J. Wallace, Brigitte Demes and Stefan Judex -- The Havers-Halberg oscillation and bone metabolism / Russell T. Hogg, Timothy G. Bromage, Haviva M. Goldman, Julia A. Katris, and John G. Clement -- Structural and mechanical changes in trabecular bone during early development in the human femur and humerus / Timothy M. Ryan, David A. Raichlen and James H. Gosman -- Appendix to Chapter 3: Detailed anatomical description of developing chondrocranium and dermatocranium in the mouse / Kazuhiko Kawasaki and Joan T. Richtsmeier

Detalles del sistema: Forma de acceso: World Wide Web
