Electronic books

Monografía

Describes the evolutionary processes in both untouched and managed forests, as well as the role of genetics in plantation forestry and conservation. This book provides a scientific basis for researchers, practitioners and students interested in the application of genetic principles to tropical forest ecology and management

Título: Tropical forest genetics Reiner Finkeldey, Hans H. Hattemer

Editorial: Berlin New York Springer 2007

Descripción física: 1 online resource (xii, 315 pages) illustrations, maps

Mención de serie: Tropical forestry 1614-9785

Documento fuente: Springer e-books

Bibliografía: Includes bibliographical references (pages 267-305) and index

Contenido: Population genetics : an overview -- Genetic variation of tropical forest plants -- Sexual and asexual reproduction in tropical forests -- Gene flow and migration -- Mating systems -- Adaptation and coevolution -- Phylogenies and evolution above the species level -- Fragmentation of forests -- Genetic aspects of the management of natural tropical forests -- Provenance research -- Domestication and breeding of tropical forest trees -- Genetic aspects of plantation forestry in the Tropics -- Conservation of genetic resources in tropical forest trees
