Cardiac rehabilitation can be extremely complex art. In Cardiac Rehabilitation, expert authors provide state-of-the-art information that serves as a manual to the multidisciplinary nature of cardiac rehabilitation in the current era, the current state of cardiac rehabilitation, and the issues facing current CR programs. Covering the major components of a CR program, including medical therapy, exercise, nutrition, and behavioral therapy, from referral to testing to individualizing the program for the participants, the volume is a thorough, vital guide to this important field. Comprehensive and substantial, Cardiac Rehabilitation will aid cardiologists and internal specialists greatly in saving the lives of heart patients across the globe
