Monografía

"Viral vectors have been the favored delivery vehicle for gene therapy in recent years. Adeno-associated virus has become a candidate of great interest because of its biological properties which include site specific integration in human chromosome 19." "The subject of this book is the use of adeno-associated virus as a new viral vector for gene therapy. AAV vectors can be used to deliver foreign DNA to mammalian cells with the goal of curing genetic diseases and allied conditions. The non-pathogenicity and site specific integration of AAV via a non-homologous recombination event into human chromosome 19 make this virus a very attractive vector. Data from in vitro and in vivo experiments are presented and discussed including recent studies with hematopoietic stem cells and non-dividing cells." "Various protocols for preparing recombinant AAV vectors and their intracellular delivery are also extensively discussed. The first trial of AAV as vector for human gene therapy was conducted in late 1995."--BOOK JACKET

Título: Adeno-associated virus (AAV) vectors in gene therapy edited by K.I. Berns and C. Giraud

Editorial: Berlin New York Springer 1996

Descripción física: 1 online resource (vi, 173 pages) illustrations

Mención de serie: Current topics in microbiology and immunology 0070-217X 218

Bibliografía: Includes bibliographical references and index

Contenido: Biology of adeno-associated virus / K.I. Berns -- The roles of AAV rep proteins in gene expression and targeted integration / J.A. Chiorini -- Packaging systems for adeno-associated virus vectors / J.P. Thrempe -- The challenges of recombinant adeno-associated virus manufacturing: alternative use of adeno-associated virus plasmid / liposome complexes for gene therapy applications / J.S. Lebkowski -- Adeno-associated virus vectors for gene therapy of the hematopoietic system / S. Chatterjee -- Adeno-associated virus vectors for gene transfer into erythroid cells / D.M. McCarty -- Adeno-associated virus 2-mediated transduction and erythroid lineage-specific expression in human hematopoietic progenitor cells / A. Srivastava -- Development of adeno-associated virus vectors for gene therapy of cystic fibrosis / B.J. Carter -- Adeno-associated virus-based vectors as antivirals / K.K. Wong
