"Programming made fun with help from the minds at Nintendo. Kids can learn how to make their own games with guided lessons created by Nintendo. From a simple game of tag to a run-and-jump obstacle course, each lesson is broken down into multiple, manageable segments that let kids go at their own pace--and have fun in the process. By playing through interactive lessons, kids will learn the basics of visual game programming. Nodon, colorful creatures with distinct personalities, keep kids engaged through lessons with tips and motivating messages. With a simple press of a button, swap between the programming screen and the game screen--watch how programming changes the game on the fly."--Amazon.com
