Título: Mastering PowerShell Scripting Automate Repetitive Tasks and Simplify Complex Administrative Tasks Using PowerShell

Edición: 5th ed

Editorial: Birmingham Packt Publishing, Limited 2024 2024

Descripción física: 1 online resource (827 pages)

Contenido: Cover -- Copyright -- Contributors -- Table of Contents -- Preface -- Chapter 1: Introduction to PowerShell -- Technical requirements -- What is PowerShell? -- The command line -- PowerShell editors -- Getting help -- Updatable help -- The Get-Help command -- Syntax -- Examples -- Parameter -- Detailed and Full switches -- Save-Help -- Update-Help -- About_* help files -- Command naming and discovery -- Verbs -- Nouns -- Finding commands -- Aliases -- About profile scripts -- Parameters, values, and parameter sets -- Parameters -- Optional parameters -- Optional positional parameters -- Mandatory parameters -- Mandatory positional parameters -- Switch parameters -- Parameter values -- Parameter sets -- Common parameters -- Confirm and WhatIf -- Confirm and ConfirmPreference -- WhatIf and WhatIfPreference -- Force parameter -- PassThru parameter -- Introduction to providers -- Drives and providers -- Introduction to splatting -- Splatting to avoid long lines -- Conditional use of parameters -- Splatting to avoid repetition -- Splatting and positional parameters -- Parser modes -- Experimental features -- Summary -- Chapter 2: Modules -- Introducing modules -- The Get-Module command -- The Import-Module command -- The Remove-Module command -- PSModulePath in PowerShell -- Module content -- Using Windows PowerShell modules in PowerShell 7 -- Finding and installing modules -- What is the PowerShell Gallery? -- The Find-Module command -- The Install-Module command -- The Update-Module command -- The Save-Module command -- Microsoft.PowerShell.PSResourceGet -- Repositories -- Version ranges -- PowerShell repositories -- Creating an SMB repository -- NuGet repositories -- About snap-ins -- Summary -- Chapter 3: Variables, Arrays, and Hashtables -- Naming and creating variables -- Provider variables -- Variables in strings -- Variable types Assignment with types on the right -- Assignment with types on the left -- Value and reference types

-- Type conversion -- Variable commands -- Get-Variable -- New-Variable -- Set-Variable -- Remove-Variable -- Clear-Variable -- Variable provider -- Variable scope -- Accessing variables -- Scope modifiers -- Numeric scopes -- Private variables -- About arrays -- Array type -- Creation by assignment -- Creating an array -- Arrays with a type -- Adding elements to an array -- List and ArrayList -- Selecting elements from an array -- Changing element values in an array -- Removing elements -- Removing elements by index -- Filling variables from arrays -- Multi-dimensional and jagged arrays -- About hashtables -- Creating a Hashtable -- Adding, changing, and removing keys -- Using a hashtable to filter -- Enumerating a Hashtable -- About Ordered -- Summary -- Chapter 4: Working with Objects in PowerShell -- Pipelines -- Standard output -- Non-standard output -- The Object pipeline -- Members -- The Get-Member command -- Accessing object properties -- Access modifiers -- Using methods -- Return types and argument types -- Creating and modifying objects -- Using PSObject -- The New-Object command -- The Add-Member command -- Add-Member and custom objects -- Enumerating and filtering -- The ForEach-Object command -- Begin and End parameters -- The Parallel parameter -- The MemberName parameter -- The Where-Object command -- Selecting and sorting -- The Select-Object command -- Calculated properties -- The ExpandProperty parameter -- The Unique parameter -- Property sets -- The Sort-Object command -- The Unique parameter -- Grouping and measuring -- The Group-Object command -- The Measure-Object command -- Comparing -- Importing, exporting, and converting -- The Export-Csv command -- The Import-Csv command -- Export-Clixml and Import-Clixml -- The Tee-Object command -- Formatting -- Formatting and exporting -- The Format-Table command -- The Format-List command -- Select-Object, Write-Host, and inline output -- Format-only properties -- Summary -- Chapter 5: Operators -- Precedence, grouping, and sub-expressions -- Operator precedence -- Grouping -- Sub-expression operator -- Array sub-expression operator -- Unary, binary, and ternary operators -- About the ternary operator -- Arithmetic operators -- Addition operator -- Subtraction operator -- Multiplication operator -- Division operator -- Remainder operator -- Increment and decrement operators -- Comparison operators -- eq and ne -- like and notlike -- Greater than and less than -- Case sensitivity -- Comparison operators and arrays -- Comparisons to null -- contains and in -- Regular expression-based operators -- match and notmatch -- replace -- split -- Logical operators -- and -- or -- not -- xor (eXclusive OR) -- Bitwise operators -- band (bitwise AND) -- bor (bitwise OR) -- bxor (bitwise eXclusive OR) -- bnot (bitwise NOT) -- shl and shr (shift left and right operators) -- Assignment operators -- Assign, add and assign, and subtract and assign -- Multiply and assign, divide and assign, and modulus and assign -- Statements can be assigned to a variable -- Assignment and other operators -- Type operators -- as -- is and isnot -- Redirection operators -- About Write-Host -- Redirection to a file -- PowerShell and default file encoding -- Redirecting streams to standard output -- Only stdout -- Redirection to null -- Other operators -- Comma -- Index -- Range -- Call -- Format -- join -- Null coalescing -- Null coalescing assignment -- Null conditional -- Pipeline chain -- Background -- Summary -- Chapter 6: Conditional Statements and Loops -- if, else, and elseif -- Assignment within if statements -- Implicit Boolean switch statements -- switch statements and arrays -- switch statements and files -- Wildcard and Regex parameters -- Script block cases -- switch statements and enums -- switch, break, and continue -- Loops -- foreach loop -- foreach keyword and foreach alias -- for loop -- do-until and do-while loops -- while loop -- Loops, break, and continue -- break and continue outside loops -- Loops and labels -- Loops, queues, and stacks -- Summary -- Chapter 7: Working with .NET -- Assemblies -- About the GAC -- Types -- Type descriptions are objects in PowerShell -- Enumerations -- Classes -- Namespaces -- The using keyword -- Using namespaces -- Using assemblies -- Type accelerators -- About PSObject and Ordered -- Members -- Constructors -- Properties -- Methods -- Fluent interfaces -- Static methods -- About the new() method -- Static properties -- Reflection in PowerShell -- The TypeAccelerators type -- The ArgumentTypeConverterAttribute type -- About generics -- Generic classes -- Generic methods -- Summary -- Online Chapter -- Chapter 10: Files, Folders, and the Registry -- Working with providers -- Navigating -- Getting items -- Drives -- Items -- Paths and .NET -- Testing for existing items -- Testing filesystem paths -- Testing registry paths -- Testing path type -- Creating items -- Reading and writing content -- Reading and writing in a pipeline -- Reading all content -- Writing content -- About text file encoding -- Temporary files -- Removing items -- Invoking items -- Item properties -- Properties and the filesystem -- Adding and removing file attributes -- Registry values -- Registry values and environment variables -- Searching for items -- Windows permissions -- Access and audit -- Rule protection -- Inheritance and propagation flags -- Removing ACEs -- Copying lists and entries -- Adding ACEs -- Filesystem rights -- Registry rights -- Numeric values in the ACL -- Ownership -- Transactions -- File catalog commands -- About hashing -- New-FileCatalog -- Test-FileCatalog -- Summary -- Chapter 11: Windows Management Instrumentation -- Working with WMI -- WMI classes -- WMI commands -- CIM commands -- Getting instances -- Getting classes -- Calling methods -- Creating instances -- Removing

instances -- Working with CIM sessions -- Associated classes -- The WMI Query Language -- Understanding SELECT, WHERE, and FROM -- Escape sequences and wildcards -- Comparison operators -- WQL filters and dates -- Logic operators -- Quoting values -- Associated classes -- WMI object paths -- Using ASSOCIATORS OF -- WMI type accelerators -- Getting instances -- Working with dates -- Getting classes -- Calling methods -- Creating instances -- Associated classes -- Permissions -- Sharing permissions -- Creating a shared directory -- Getting a security descriptor -- Adding an access control entry -- Setting the security descriptor -- WMI permissions -- Getting a security descriptor -- The access mask -- WMI and SDDL -- Summary -- Chapter 12: Working with HTML, XML, and JSON -- ConvertTo-Html -- Multiple tables -- Adding style -- ConvertTo-Html and Send-MailMessage -- Windows PowerShell and ConvertTo-Html -- Modifying HTML content -- XML commands -- About XML -- Elements and attributes -- Namespaces -- Schemas -- Select-Xml -- Select-Xml and namespaces -- ConvertTo-Xml -- System.Xml -- The XML type accelerator -- XPath and XmlDocument -- SelectNodes and XPathNodeList -- Working with namespaces -- Creating XML documents -- Modifying element and attribute values -- Adding elements -- Removing elements and attributes -- Copying nodes between documents -- Schema validation -- Inferring a schema -- System.Xml.Linq -- Opening documents -- Selecting nodes -- Creating documents -- Working with namespaces Modifying element and attribute values
