"Of the 515,000 maternal deaths that occur every year around the world, 99 percent take place in developing countries. Women in the developing world have a 1 in 48 chance of dying from pregnancy-related causes; the ratio in industrial countries is 1 in 1,800. For every woman who dies, another 30-50 woman suffer injury, infection, or disease. In developing countries, pregnancy-related complications are among the leading causes of death and disability for women ages 15-49. Of all the human development indicators, the greatest discrepancy between industrial and developing countries is in maternal health."
