

Abordaje de enfermería en paciente con trauma craneoencefálico: a propósito de un caso [

2023

text (article)

Analítica

Cranioencephalic trauma (TCE) includes a physical injury or deterioration of the cranial structures due to a sudden impact, which can cause alterations to the patient's physiology, this type of trauma can cause concussions, contusions, bleeding and permanent damage to the encephalic structures, affecting in a negative way to the lifestyle of the individual or even death. The objective of this article is to describe the health care processes that must be carried out in the patient with TBI, in addition to focusing on the nursing approach. Carrying out a descriptive and analytical methodology, since the most fundamental clinical criteria of the case will be observed, detailed and analyzed, in addition to describing epidemiological aspects that are relevant for a more optimal understanding of this pathology; Obtaining quality information regarding the importance of nursing staff in this treatment, being essential to carry out an organized and coordinated procedure to ensure a good prognosis for the patient
