

Afectación de la calidad de vida generada por el vitíligo con compromiso genital en mujeres adultas residentes en el Caribe colombiano [

2024

text (article)

Analítica

Introduction: Female genital vitíligo affects the skin of the vulva and can be isolated or generalized. **Objective:** To identify the magnitude of the impact on quality of life (QoL), its consequences, the psychosocial burden, and the impact generated by vitíligo with genital involvement. **Method:** A descriptive study was designed with adult women with genital vitíligo and residents of the Colombian Caribbean. QoL, its consequences, psychosocial burden, and the impact of vitíligo were evaluated with the Dermatology Life Quality Index and Vitíligo Impact Scale. **Results:** 78 women participated. The mean of age was 46.8 ("12.5), 69.2% were "great" or "extremely great" in terms of QoL impairment in 79% because of the limitation in interpersonal relationships or sexuality, and in 97.4%, the psychosocial impact was high. The affection of QoL. **Conclusions:** Vitíligo generates a high impact and great magnitude in affecting QoL in women
