Monografía

"This is the first comprehensive dictionary of environmental economics, compiled by leading academics in the field. Each expression or phrase is explained clearly in non-technical language, with references given to its use in the growing literature on the subject area. From abatement to zonal travel cost method there are over 1000 cross-referenced entries covering topics such as: environmental instruments for policy-making; techniques applied in environmental and natural resource economics; major issues in environmental economics and environmental management; economics of sustainable development; natural resource accounting; and international environmental agreements. As well as providing incisive answers to questions such as 'what is natural capital?' or 'when are crowding diseconomies important?' the dictionary includes a list of commonly used acronyms and abbreviations and a complete bibliography detailing the major texts in the field are provided. The Dictionary of Environmental Economics will prove to be an essential tool for students and policy makers."--Front flap of dust cover
