c2005

Monografía

The lower extremity is a tremendously variable anatomic region that can be used to establish individual identity, or, if damaged, can be used to reconstruct antemortem, perimortem, and postmortem trauma. In Forensic Medicine of the Lower Extremity: Human Identification and Trauma Analysis of the Thigh, Leg, and Foot, leading forensic authorities rigorously review both the scientific and practical aspects of human identification, trauma analysis, and biomechanics of lower extremity as encountered in decomposed or dismembered individuals, mass casualty situations, and human rights abuse investigations. On the scientific side, the authors describe the biochemical events of decomposition, detail the use of radiology to facilitate identification and evaluate trauma, and explain principles of osteology, with an emphasis on the implications for skeletal anatomy for age, sex, race, and height estimation. On the practical side, they apply these approaches to trauma analysis and accident reconstruction, including slip-and-fall incidents, impact, traffic, and pediatric injuries, and considerations of foot and footprint identification. Specific case studies discuss the identification process using the foot and ankle and illuminate the forensic potential of feet, footwear, and barefoot impression evidence. Authoritative and copiously illustrated, Forensic Medicine of the Lower Extremity: Human Identification and Trauma Analysis of the Thigh, Leg, and Foot comprehensively reviews the basic process of forensic identification, trauma investigation, and accident reconstruction of the lower extremity

Título: Forensic medicine of the lower extremity human identification and trauma analysis of the thigh, leg, and foot edited by Jeremy Rich, Dorothy E. Dean, Robert H. Powers ; foreword by Kathleen J. Reichs

Edición: 1st ed. 2005

Editorial: Totowa, N.J. Humana Press c2005

Descripción física: 1 online resource (438 p.)

Mención de serie: Forensic Science and Medicine

Nota general: Description based upon print version of record

Bibliografía: Includes bibliographical references and index

Contenido: Analysis, Development, and Identification Markers -- The Decomposition of Human Remains -- Forensically Significant Skeletal Anatomy -- Normal Osteology of the Knee Joint and Markers of Stress and Injury -- Anthropological Analysis of the Lower Extremity -- Estimating Age at Death -- Radiology of the Lower Extremity -- Trauma Analysis and Reconstruction -- Injuries to Children -- Skeletal Trauma Analysis of the Lower Extremity -- Biomechanics of Impact Injury -- Injuries of the Thigh, Knee, and Ankle as Reconstructive Factors in Road Traffic Accidents -- Biomechanical Analysis of Slip, Trip, and Fall Accidents -- Foot Identification Case Studies, Pedal Evidence, and Ongoing Research -- "The Game is Afoot!" -- The Role of Feet and Footwear in Medicolegal Investigations -- Ongoing Research Into Barefoot Impression Evidence

Lengua: English

ISBN: 1-280-35926-9 9786610359264 1-59259-897-8

Materia: Forensic osteology Leg

Autores: Rich, Jeremy (Jeremy McMaster) Dean, Dorothy E. Powers, Robert H.

Enlace a formato físico adicional: 1-61737-464-4 1-58829-269-X

Punto acceso adicional serie-Título: Forensic Science and Medicine
