Monografía

Celebrating Volume 100: Thirty years ago Springer-Verlag together with a distinguished Board of Editors started the series Structure and Bonding. Initially the series was set up to publish reviews from different fields of modern inorganic chemistry, chemical physics and biochemistry, where the general subject of chemical bonding involves a metal and a small number of associated atoms. Three years ago the aims of the series was refined to span the entire periodic table and address structure and bonding issues wherever they may be relevant. Not only the traditional areas of chemical bonding will be dealt with but also nanostructures, molecular electronics, supramolecular structure, surfaces and clusters. With these aims in mind it is noteworthy that Volume 100 effectively reinforces and illustrates these ideals and is titled Pi-Electron Magnetism from Molecules to Magnetic Materials

**Título:** [Pi]-electron magnetism from molecules to magnetic materials edited by Jaume Veciana, D. Arcon, M. Deumal, K. Inoue, M. Kinoshita, J.J. Novoa, F. Palacio, K. Prassides, J.M. Rawson, C. Rovira

**Editorial:** Berlin, Heidelberg Springer Berlin Heidelberg 2001

**Descripción física:** 1 online resource (xii, 208 pages) 128 figures, 14 tables

**Mención de serie:** Structure and Bonding 0081-5993 100

**Documento fuente:** Springer Nature eBook

**Bibliografía:** Includes bibliographical references and index

**Contenido:** M. Kinoshita: An Organic Radical Crystal Showing Spontaneous Ferromagnetic Order -- J.J. Novoa, M. Deumal: The Mechanism of the Through-Space Magnetic Interactions in Purely Organic Molecular Magnets -- K. Inoue: Nitroxide Radical-Metal-Based Molecular Magnets -- J.M. Rawson, F. Palacio: Magnetic Properties of Thiazyl Radicals -- K. Prassides, D. Arcon: Magnetism in Fullerene Derivatives -- C. Rovira: Molecular Compounds Showing a Spin Ladder Behavior

**Lengua:** English
