

Building a Web App with Blazor and ASP .Net Core

Trivedi, Jignesh

Monografía

Learn how to create and deploy a SPA in C# with Blazor Key Features * Get familiar with the basic and advanced concepts of the Blazor framework * Understand how to implement JavaScript interop in Blazor * Learn how to inject the service dependency in Blazor * Learn how to implement security using Authentication and authorization * Deploy and host your Blazor app on IIS and Azure * Description Blazor is a new, open-source, and SPA web framework that allows you to build a web application using C# and HTML. Blazor enables you to write C# code instead of JavaScript. This book is a comprehensive guide about the new modern Blazor framework. It begins with an introduction to the Blazor and its components and concepts. It explains how you can start the development process, what tools you can use to develop an application, and how you can deploy it. You will then learn more about Databind, Eventbinding, layout, routing, JavaScript interop, and Dependency Injection. Concepts such as Authentication and authorization, error handling are also covered. Towards the end, you will learn how to deploy your Single Page Application Using Blazor. What will you learn * Explore and use a various way to create a Blazor component * Get familiar with the working of Data Binding, Event Binding, Layouts, Routing, and Validation * Learn how to invoke JavaScript functions from. NET methods * Preserving State in Server-Side Blazor applications * Authentication and Authorization using Facebook API & Google API * Host and Deploy your Blazo app on IIS and Azure * Who this book is for This book is for web developers who want to use Blazor to build web apps. This book will also help and guide web developers who are currently using Blazor. Table of Contents 1. An Introduction to Blazor 2. Components and Structure for Blazor Applications 3. Blazor Concepts 4. Dependency injection in Blazor 5. JavaScript interop 6. State management 7. Authentication and Authorization 8. Handle & Log errors in Blazor Application 9. Getting Started with Blazor Using Visual Studio 2019 10. Hosting and Deployment About the Author Jignesh Trivedi is working as a software developer with a leading organization and having more than 14 years of experience. He is very passionate about Microsoft Technologies. He is an author, speaker, and Microsoft MVP. He loves building great products and POC (proof of concepts) using the best available technologies. He loves to share his knowledge by contributing to the Developer community. His LinkedIn Profile: <https://www.linkedin.com/in/jignesh24>

Título: Building a Web App with Blazor and ASP . Net Core

Edición: 1st ed

Editorial: Delhi BPB Publications 2020 2020

Descripción física: 1 online resource (187 pages)

Variantes del título: Building a web app with Blazor and ASP .Net Core Building a Web App with Blazor and ASP.NET Core

Contenido: Cover Page -- Title Page -- Copyright Page -- Dedication -- About the Author -- About the Reviewer -- Acknowledgement -- Preface -- Errata -- Table of Contents -- 1. An Introduction to Blazor -- Introduction -- Objectives -- What is Web Assembly? -- Security considerations -- WebAssembly limitations -- Facts about WebAssembly -- Is WASM kill JavaScript? -- Is WASM a new programming language? -- Can other programming languages write WASM code other than C and Rust? -- Is it an upgraded version of Silverlight? -- What is Blazor? -- Interpreted mode -- Ahead-of-time compiled mode -- Features of Blazor -- Blazor (client) supported platforms -- Prerequisite Blazor development -- .NET Core Framework (.NET Core SDK) -- Integrated Development Environment - IDE -- Creating first Blazor application -- Creating a project with Visual Studio 2019 -- Creating a project using dotnet CLI -- Understand project structure and component -- Understand Blazor booting process -- Render tree in Blazor application -- Blazor client-side -- Blazor server side -- Summary -- What did you learn in this chapter? -- What next? -- Questions -- 2. Components and Structure for Blazor Applications -- Introduction -- Objectives -- What is the Blazor component? -- Create Blazor component -- Using a single file - inline -- Component with code behind -- Class only component -- Life Cycle methods of component -- OnInitialized and OnInitializedAsync -- OnParametersSet and OnParametersSetAsync -- OnAfterRender and OnAfterRenderAsync -- SetParametersAsync -- StateHasChanged -- Dispose component with IDisposable -- Component parameters -- Child component -- Templated components -- Grid view template example -- List view template example -- Define template inline - using Razor template syntax -- Cascading values -- Declaring HTML attributes using parameters -- Import components -- Summary What did you learn in this chapter? -- What next? -- Questions -- 3. Blazor Concepts -- Introduction -- Objectives -- Data Binding -- One-way data binding -- Two-way data binding -- Event Binding -- Event Callback -- Layouts -- Introduction to Layouts page -- Specify a layout in a component -- Define layout globally -- Nested layouts -- Example -- Routing -- @page directive/route attribute -- Example -- Route parameters -- Route constraints -- Example -- Programmatically navigate one component to another component -- Query parameters -- Forms and validation -- Data annotations -- Summary -- What do you learn in this chapter? -- What is next? -- Questions -- 4. Dependency Injection -- Introduction -- Objective -- Types of dependency injection -- Construction injection -- Setter injection -- Interface based injection -- Service lifetime -- Scoped -- Singleton -- Transient -- Add services to the application -- Default services -- Inject the service in the component -- Example of adding service as a dependency -- Use dependency in services -- Using OwningComponentBase -- Summary -- What you learned in this chapter? -- What next? -- Questions -- 5. JavaScript Interop -- Introduction -- Objective -- What is JavaScript Interop? -- Invoke JavaScript functions from C# (.NET) methods -- Invoke C# (.NET) methods from JavaScript -- Capture references to elements -- Detect when a Blazor app is pre-rendering -- Share interop code in a class library -- Summary -- What you learned in this chapter? -- What next? -- Questions -- 6. State Management -- Introduction -- Objectives -- Understand Blazor circuits -- Preserve state across circuits -- Where to persist state -- On server in database -- On client in the browser -- URL -- Third-party browser storage solutions -- Summary -- What you learned in this chapter? -- What next? -- Questions 7. Authentication and Authorization -- Introduction -- Objective -- Authentication -- AuthenticationStateProvider service -- Custom AuthenticationStateProvider -- Authorization -- AuthorizeView -- Authorize attribute -- Custom content for unauthorized router component -- Authorization rules check-in procedural logic -- Authorization in Blazor client-side apps -- Authentication using third party service -- Using Microsoft API -- Using Google API -- Using Facebook API -- Use multiple authentication providers together -- Summary -- What you learned in this chapter? -- What next? -- Questions -- 8. Handle Exception and Log Error -- Introduction -- Objective -- The behavior of Blazor app for an unhandled exception -- Places where errors may occur -- Component instantiation -- Lifecycle methods -- Rendering logic -- Component disposal -- JavaScript interop -- Event handlers -- Circuit handlers and disposal -- Prerendering -- Enabling detailed errors -- Introduction to the logging framework -- Configure logging provider -- Set default minimum log level -- Logging using serilog -- Write log to file using serilog -- Summary -- What you learned in this chapter? -- What next? -- Questions -- 9. Getting Started with Blazor Using Visual Studio 2019 -- Introduction -- Objective -- Setting up the Blazor development environment using Visual Studio 2019 -- Creating a single page application using Blazor -- Scaffolding the model using EF Core -- CRUD operation with EF in Blazor server app -- Create Add/Edit page with validation -- Delete customer -- Installed project template for Blazor -- Summary -- What you learned in this chapter? -- What next? -- Questions -- 10. Hosting and Deployment -- Introduction -- Objective -- Publish Blazor server app -- Deploying Blazor app on IIS -- Prerequisites -- Configure IIS -- Deploying Blazor app on Azure -- Prerequisites Deploy app on Azure as app service -- Create

publish profile with create app service or selecting existing one -- Sign in using Azure account -- Configure App Service. -- Publish application on app service -- Create database server and database on Azure -- Login to Azure portal and select SQL databases from the left menu -- Create a database -- Get connection string -- Configure firewall for SQL server -- Summary -- What you learned in this chapter? -- Questions
