Monografía

The aim of this volume is to provide an in-depth overview of the state-of-the-art research on apoptosis with contributions from key groups working in the field. This type of programmed cell death has received wide and rapid attention and now is considered as one of the hottest areas of science. The volume covers various aspects of the apoptotic death process from the morphological and biochemical features, mechanisms and genetic regulation to its role in pathological process and potential implications for biomedical research and biopharmaceutical production

Título: Apoptosis [recurso electrónico] edited by M. Al-Rubeai

Editorial: Berlin, Heidelberg Springer Berlin Heidelberg 1998

Descripción física: XI, 195 p. online resource

Mención de serie: Chemistry and Materials Science (Springer-11644) Advances in Biochemical Engineering /Biotechnology 0724-6145 62

Documento fuente: Springer eBooks

ISBN: 9783540696940 978-3-540-69694-0

Materia: Biotechnology Chemical engineering Chemistry Microbiology

Autores: Al-Rubeai, M., editor

Entidades: SpringerLink (Online service)

Enlace a formato físico adicional: Printed edition 9783540641537
